

KUEHLMEISTER by CoolSaver

To get the most out of your cold storage room!

Anyone who chooses the Kuehlmeister will see the results immediately. Together with your refrigeration technician, we'll configure the new parameters on the refrigeration unit on the day of installation, making it easy to see the benefits CoolSaver has to offer.

Advantages:

- Up to 30 % energy savings
- Reduced condensation, ice buildup and mold growth
- The R Series also reduces ethylene and helps keep fruits, vegetables, and cut flowers fresh longer
- Less maintenance and extended service life of refrigeration systems
- Take advantage of attractive incentives through CO² reduction
- Installation requires minimal effort and can be performed without interrupting normal operations

“The staff testifies that the cooling is much faster now. There is also not much frost on the cooling elements in the cold storage rooms anymore as the air does not condense. The environment feels safer to work in and the removal of ice is no longer a part of the staffs routines.”

McDonald´s Franchisee

The Kuehlmeister is based on modern zeolite technology. By adsorbing water molecules and gaseous compounds, it precisely regulates the humidity in the cold storage room.

This sustainable solution is particularly well-suited for companies with high-traffic refrigeration and freezer areas - such as those in food processing, logistics, the restaurant industry, or manufacturing.
